PROFILE

Full-stack software engineer working as a Student Frontend Developer at Nordea while completing an MSc in Computer Science and Engineering at DTU. Led two client development teams as Software Project Manager at VH Software (Flutter/Firebase, Next.js/Supabase) and taught OOP, AOP and Web Technologies at SDU for three years.

EXPERIENCE

Student Frontend Developer · Nordea, Copenhagen (part-time) Sep 2026 – Present

- Frontend development in TypeScript and AngularJS within Team Phoenix, Savings & Wealth unit, building digital wealth products alongside my MSc studies.

Software Project Manager · VH Software, Bratislava (hybrid) Dec 2025 – Present

- Lead two client teams in parallel, from requirements to deployment: a Flutter/Dart health rewards app for iOS and Android, and a Next.js/Supabase C2C marketplace.
- Architected the app's anti-cheat reward system in Firebase Cloud Functions, integrated with Apple HealthKit and Google Health Connect.
- Oversee the marketplace's PostgreSQL architecture, ZIP-radius search, media compression and Stripe payments; run sprints and peer code reviews.

Student Instructor & Academic Mentor · SDU, Sønderborg Sep 2023 – Jul 2026

- Appointed three consecutive years to teach OOP, Advanced-Oriented Programming and Web Technologies and to supervise semester project teams (200+ students annually).
- Ran code reviews, set assignments and mentored students through full-stack projects. Also Study Start Mentor for new students (Aug 2024 – Jan 2025).

Student Programmer · Play eSailing, Denmark (hybrid) Nov 2023 – Aug 2026

- Built UI, game map environments and game logic integration for a real-time competitive sailing simulator in Unity and C#, with low-latency multiplayer on Photon Fusion.

IT & Innovation, Service Desk Intern · 365.bank, Bratislava Sep 2021 – Jun 2022

- Resolved software and hardware issues for bank employees across branches, set up new equipment and implemented device security measures.

PROJECTS

- eSailing Simulator** (BSc thesis with Play eSailing): real-time multiplayer sailing game in Unity with PhysX wind and buoyancy physics and Photon Fusion networking tuned for under 100 ms response.
- Waterless Dashboard** (client project): full-stack IoT dashboard for urinal usage analytics with real-time data, role-based auth and email notifications (React, Vite, Firebase).
- AI Book Recommender**: Django backend with a custom-trained recommendation model and user authentication.

EDUCATION

MSc Computer Science and Engineering · Technical University of Denmark (DTU) Sep 2026 – Jun 2028

BSc Software Engineering · University of Southern Denmark (SDU), Sønderborg · GPA 9 Sep 2023 – Jun 2026

SKILLS

Languages: TypeScript, JavaScript, Dart, C#, Java, Python, C/C++, SQL, PHP

Frontend & mobile: AngularJS, React, Next.js, Flutter, HTML/CSS

Backend & data: Firebase (Cloud Functions), Supabase, PostgreSQL, Node.js, Laravel, Django, REST APIs, Stripe

Game & tools: Unity, Photon Fusion, Git/GitHub, Docker, Jira, Figma, Agile/Scrum

CERTIFICATIONS

CCNA v7: Introduction to Networks; Switching, Routing, and Wireless Essentials; Enterprise Networking, Security, and Automation · Unity Multiplayer Photon Fusion Game Development (Udemy, 2024) · Instructor Course, SDU (2024) · Foundational C# with Microsoft · The Ultimate Guide to Game Development with Unity
